## Overview

What is solar battery storage?

Solar battery storage, also known as batteries for solar systems, provides you with the added benefit of storing excess solar energy. They help extend the use of your solar PV system by storing surplus solar power that's been generated for use when the panels are not generating electricity, such as at night or after dark.

How much power can a solar battery store?

A medium-sized solar battery can store around 1400 watt-hours of power (also known as 1.4 kilowatt-hours). Ideally, you should keep your batteries at least 50% full. So, you'd have around 720 watt-hours of usable power.

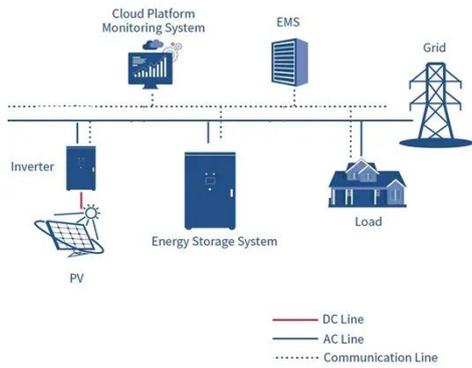

Can solar power be stored in a battery?

Existing solar systems typically have solar inverters, which change the DC power produced by panels to AC power that can be consumed in your home or exported onto the grid. But if you want to store that AC power in a battery, it needs to be inverted again to DC power.

Which battery storage systems work best?

Because there's no perfect battery for every solution, here are the battery storage systems that solar.com Energy Advisors find work well with homeowners who invest in solar and battery. From a hardware and software perspective, the Tesla Powerwall 3 is an outstanding product.
