**48v58 uses inverter to convert  
to 220v**

## Overview

---

Can a 48V inverter be rated at 2 kVA?

In this post I have explained a simple 48V inverter circuit which may be rated at as high as 2 KVA. The entire design is configured around a single IC 4047 and a few power transistors. I am a big fan of u.i am a wisp. i need an inverter design with 48volt DC input and 230volt output supply and output power in the range up to 500w.

How much power does a 5000W inverter use?

5000W 48V DC to 220V AC pure sine wave inverter. This inverter operates with a 48V DC voltage compatible with SOLISE lithium batteries. It transforms 48V DC (direct current) into 220V AC (alternating current). Peak power : 10 000W <3sec. STANDARDS Certifications : RoHS I CE Warranty - 2 years.

Can I use a Zener based regulator for 48V inverter circuit?

In the above explained 48V inverter circuit I have used a BC546 emitter-follower series pass circuit to step down the 48V DC to 9V DC for supplying the IC 4047. However, if the BC546 transistor is not available, we can incorporate a zener/resistor based regulator for achieving the same results, as shown in the following diagram:.

What is IC 4047 in a 48V inverter?

Thanks & Regards Referring to the shown 48V inverter circuit, the IC 4047 forms the main oscillator stage responsible of producing a totem pole outputs for the connected output stage. The output stage is made by configuring a 4 individual high gain high power transistors modules, two of them on each channel of the push pull output stage.

## 48v58 uses inverter to convert to 220v
