# **8mm thick solar panels on the exterior wall**

## Overview

---

What is a solar panel wall mount?

Solar Panel Wall Mount: The Ultimate Guide for Installation and Usage - Solar Panel Installation, Mounting, Settings, and Repair. A solar panel wall mount is a mounting system that secures solar panels onto walls. These mounts are especially useful for buildings with limited roof space or for aesthetic preferences.

Which properties are best suited to wall-mounted solar panels?

Properties that are most suited to wall-mounted solar panels are ones that have large south-facing walls, which aren't covered by any shade. South-facing panels are exposed to sunlight throughout the day, which is especially handy for wall-mounted solar panels, given their performance is already hindered by their limited angle.

What angle should wall-mounted solar panels be placed?

Where possible, wall-mounted panels should be titled to a 60-degree angle, which is the optimal angle for capturing sunlight when the sun is low in the sky. It's also best to place wall-mounted solar panels on a south-facing wall, as this will expose them to the most direct sunlight throughout the day.

What are the best mounting systems for solar panels?

The best types of mounting systems are those that withstand the elements and adjust according to your needs – much like a steadfast tree adjusting to the wind. Our attention to detail in choosing the right mounting system ensures that your solar panels perform optimally, saving you energy and money.
