# **Apartment Building Energy Storage Project**

## Overview

---

The power management system (PMS) for detached houses has been studied for many years; however, the PMS for apartment buildings (APBs) is not fully understood considering the structures of the APB.

What is an integrated power management system for an apartment building?

Integrated power management system for an apartment building. Vehicle-to-Home, PV generation and battery energy storage systems as DERs. Two-stage system with multiple objectives considering household and building sides.

Does a residential building need a battery energy storage system?

Photovoltaic (PV) generation systems have operated in office and residential buildings . The PV generation is uncertain and depends on multiple variables, such as the weather; therefore, this facility is expected to cooperate with a battery energy storage system (BESS) in a residential building .

What is the power system of an apartment building (APB)?

Fig. 1. Electrical power system of an apartment building (APB), including electric vehicles (EVs), photovoltaic (PV) generation, and battery energy storage systems (BESS). The main power of the APB is supplied by the commercial power grid, and some power supplementation is provided by the PV generation facility on the rooftop.

Are apartment buildings energy efficient?

Within a limited geographic area, apartment buildings (APBs) provide multiple living spaces. Because of this advantage, many multifamily buildings have been built in cities, sometimes forming large complexes. Because many residents live in APBs, the energy consumption density is high.
