Are solar panels integrated

SMART GRID & HOME

Overview

What are integrated solar panels?

In essence, integrated solar panels are the same as traditional solar panels. They absorb sunlight and convert it into usable electricity for your home. The difference is that instead of being mounted on top of your roof, they are built into its structure. This is done by replacing a section of your roof's materials with solar panels.

What is the difference between regular and integrated solar panels?

The primary difference between them is that regular solar panels are installed on top of your roof and can have a bulky appearance, whereas built-in solar panels are more aesthetically appealing. Here's an overview of some of the other differences between regular and integrated solar panels:.

How can solar energy be integrated?

By 2030, as much as 80% of electricity could flow through power electronic devices. One type of power electronic device that is particularly important for solar energy integration is the inverter. Inverters convert DC electricity, which is what a solar panel generates, to AC electricity, which the electrical grid uses.

Are integrated solar panels right for You?

If you want to enjoy all the benefits of solar panels without compromising on your home's aesthetic appeal, then integrated solar panels might just be the best option for you. Once installed, you can enjoy free clean electricity from your solar system, as well as annual savings of up to £1,005.
