Athens three-phase inverter production plant

Overview

What is a 3 phase inverter system?

A three-phase inverter system is operating at an output power level ranging from 10kW to above 300kW, used in commercial and decentralized utility-scale applications. High output power can be realized through stacking multiple medium-power blocks.

What is a three-phase string inverter system?

Three-phase string inverter systems convert the DC power generated by the photovoltaic (PV) panel arrays into the AC power fed into a 380 V or higher three-phase grid connection.

What types of inverters are available?

A wide range of inverters (solar pv and storage), tailored to suit any type of system scale: residential, commercial, industrial and utility scale.

What is three-level topology in high-power solar inverter system?

Three-level topology is considered as the best configuration in high-power solar inverter systems. In addition to lower switching losses and drain-source voltage requirements, EMI can also be reduced as the conducted EMI is mainly linked to the current ripple. Moreover, a three-level system can provide better sinusoidal voltage waveform.
