Australian Communications 5G Base Station

Overview

How do I find mobile phone base station sites in Australia?

You can use the Radio Frequency National Site Archive (RFNSA) website to search for active and proposed mobile phone base station sites in Australia. Each site has a dedicated information page that includes the site's location, an Environmental EME Report, the carrier's contact details, and other relevant community consultation information.

What is the difference between a 5G base station and a small cell?

Small cells have a lower power output than older base stations. This means they have lower EME emissions. 5G base stations can also go into 'sleep mode' when they are not in use. This means their power output and EME emissions will be lower than 4G base stations.

What does the 2025 code mean for mobile phone base stations?

The 2025 revision to the Code aims to improve the means of communication and accessibility of information to local Council and the community relating to the deployment of mobile phone base stations. a precautionary approach to the siting, design and operation of mobile phone base stations.

What is the mobile phone base station deployment industry code?

The Code replaces the C564:2020 Mobile Phone Base Station Deployment Industry Code. The Code supplements the requirements already imposed on Carriers under the existing legislative scheme by requiring them to consult with local communities on the site selection, design and operation of mobile phone base stations.
