BMS is a power battery

Overview

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

What are the different BMS architectures for a battery system?

Different battery systems call for different BMS architectures: Centralized: Single controller handles all cell data Distributed: Module-level sensors report to a central unit Modular: Smart modules manage subsets of the battery independently Sensors: Voltage, current, temperature Microcontroller (MCU): BMS “brain” for logic and data processing.

What is a multi-master battery management unit (BMS)?

NX-Tech’s BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.

Why did BMS start using lithium ion batteries?

The early 1990s saw the commercialization of lithium-ion batteries, which was a significant turning point in BMS's history. Higher energy density was provided by lithium-ion batteries, but because of their sensitivity to overcharging and vulnerability to thermal runaway, they needed more sophisticated management systems.
