# **Battery BMS system architecture**

## Overview

---

What is battery management system architecture?

The battery management system architecture is a sophisticated electronic system designed to monitor, manage, and protect batteries. It acts as a vigilant overseer, constantly assessing essential battery parameters like voltage, current, and temperature to enhance battery performance and guarantee safety.

What are the different types of battery management systems (BMS)?

As battery technology advances, expect BMS architectures to keep pace, delivering safer, smarter, and more efficient energy solutions. Explore the three main types of Battery Management Systems (BMS): Centralized, Distributed, and Modular. Learn their architectures, benefits, and applications.

What functionalities can be found in a battery management system (BMU)?

Some other functionalities that can be in the BMU are interlock functionality or the real time clock and vector management system for the software. BMS Software Architecture: The battery management system architecture has different layers that abstract different parts of hardware.

What is modular battery management system architecture?

Modular Battery Management System Architecture Modular battery management system architecture involves dividing BMS functions into separate modules or sub-systems, each serving a specific purpose. These modules can be standardized and easily integrated into various battery systems, allowing for customization and flexibility.
