Battery cabinet to prevent condensation water station cabinet

Overview

How to prevent water condensation inside an enclosure?

An ideal way to prevent water condensation inside any enclosure is to prevent moisture getting inside the enclosure in the first place. However, in real life, this kind of protection is not always possible and we need to have other ways in which we can prevent condensation from forming. Here are three top tips:.

How can a non-metallic enclosure prevent condensation?

If you are not able to position an enclosure away from any temperature fluctuations and damp areas, then two of the most-often used ways to prevent condensation are ventilation and heating devices. One benefit that non-metallic enclosures have over metallic enclosures is that the insulation properties are better and the heating capacity is lower.

What causes condensation in an electrical enclosure?

Condensation is caused by warm moist air coming into contact with a surface that is colder than the air's dew point. So, what happens in an electrical enclosure?

What causes condensation inside an enclosure?

In humid conditions the warmer air is the more water vapour it holds.

Do sealed enclosures stop condensation?

They don't stop condensation inside the enclosure. Even sealed enclosures can trap moist air during setup, which later turns into water when the temperature drops. Even a small amount of moisture inside an enclosure can lead to big problems. Unlike a splash of rain or an obvious water leak, condensation builds up quietly.
