# **Bidirectional industrial frequency sine wave inverter**

## Overview

---

What is a bidirectional inverter?

Unlike conventional inverters that only convert DC (direct current) to AC (alternating current), bidirectional inverters can also convert AC back to DC, allowing energy to be stored or fed back into the grid. This functionality is essential for applications like renewable energy systems, microgrids, and battery backup solutions.

Should you use a bidirectional inverter in a solar energy system?

Using a bidirectional inverter in a solar energy system offers several advantages: Bidirectional inverters allow for efficient two-way power conversion between AC and DC, enabling the system to charge batteries from both solar panels and the grid, and to supply power from batteries during outages.

What is a single-phase bidirectional power-flow transition?

Single-phase bidirectional power-flow transition: full-power 7.3 kW inverter mode to full-power 7.3 kW PFC mode under 230 VAC line-to-neutral voltage.

What is a modified square wave inverter?

The Modified Square Wave also known as the Modified Sine Wave Inverter produces square waves with some dead spots between positive and negative half-cycles at the output. The cleanest utility supply like power source is provided by Pure Sine Wave inverters.
