Burkina Faso Emergency Energy Storage Power Supply

Overview

How is energy used in Burkina Faso?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Does the United States support energy transactions in Burkina Faso?

In addition, various firms have received U.S. Embassy support to move transactions forward. The page below gives an overview of the energy sector in Burkina Faso, and lists Power Africa's financially closed transactions in the country, some of which are already online and generating critical electricity supply for the people of Burkina Faso.

What are the different types of energy transformation in Burkina Faso?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Burkina Faso for 2022. Another important form of transformation is the generation of electricity.

How has Burkina Faso changed over the years?

Burkina Faso has made remarkable progress in recent years, with an increase in installed capacity from 324.6 megawatts (MW) in 2017 to 410 megawatts in 2019. The share of renewable energy also surged from 9.4% in 2015 to 18.36% in 2019.
