The inverter's job is to turn power from DC to AC. 12V solar panels are applicable for small size solar system projects for: Most RV and motorhomes already have 12V batteries for AC, refrigerator, water heater control and lighting. So it makes perfect sense to use 12V for these type of systems.

How does a 12V inverter work?

Understanding the Basics of a 12V Inverter A 12V inverter takes low-voltage DC current from a car battery, solar battery, or portable power station and converts it into household-level AC electricity. The inverter's internal circuitry boosts the voltage to around 120V (in the U.S.) or 230V (in other regions), so you can run devices every day.
