## ENERGY STORAGE SYSTEM

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

The image shows a tall, grey Energy Storage System (ESS) unit. It has a central vertical green stripe with a blue hexagonal handle in the middle. The top right corner of the unit has the 'ESS' logo. At the bottom, there are two yellow warning triangles with exclamation marks. The unit is mounted on a black base.

Can a power inverter charge a battery?

A power inverter is great for energy needs. It can easily take battery DC power and convert it to AC power. However, as you use that AC electricity, your battery life starts to go down, and you need a charge. Eventually, a power inverter will leave you with a dead battery unless you can charge your battery while connected to an inverter.

What is the difference between solar power and inverter charging?

The only difference is the setting on your charging controller, which we will start to review now. Solar power is the most common way to charge your battery while connected to an inverter. It acts as a battery charger that provides constant voltage to keep your battery charging.

How does a power inverter get its energy?

As we dive into power source options and using a battery charger, it's important to understand how the power inverter gets its energy. Most inverter set-ups have an inverter (converts 12 Volt DC power to 120 Volt AC power) and a power source (usually a single battery or battery bank). Inverter uses the battery to generate AC power.

How do you charge a battery with a solar inverter?

To address this, solar power is the most preferred method for charging the battery while using the inverter, especially in off-grid situations or during power outages. Setting up a solar charging system involves using a solar panel, a solar charge controller, and proper battery connections.
