Can Dushanbe energy storage batteries be transported by air

Overview

Can you transport lithium batteries by air?

Yes, you can transport lithium batteries by air, but specific regulations must be followed. Lithium batteries are classified as dangerous goods due to their potential to overheat and catch fire. Airlines and regulatory agencies, like the International Air Transport Association (IATA), set strict guidelines to ensure safety during transport.

What types of batteries can be transported by air?

You will encounter two main types when transporting lithium batteries by air: lithium ion batteries and lithium metal batteries. Lithium ion batteries, often used in consumer electronics like laptops and smartphones, are rechargeable and have a typical energy density of 160–270Wh/kg for NMC Lithium battery and 180–230Wh/kg for LCO Lithium battery.

How do I transport a lithium ion battery?

You must pay close attention to the state of charge (SoC) and quantity limits when transporting lithium batteries. For lithium-ion batteries shipped by air (UN 3480), IATA requires that you ship them at no more than 30% of their rated capacity unless you have special approval. This rule reduces the risk of thermal runaway during transport.
