## Overview

---

Should you choose off-grid or grid-tied solar panels?

When deciding between off-grid and grid-tied systems, there are several pros and cons to consider. Battery storage. Surplus energy stored in batteries can be used during periods of low sunlight when the solar panels cannot generate sufficient power. No credit potential. Excess energy isn't stored in the grid and can't be exchanged for credit.

Should solar energy be integrated with coal-fired power plants?

The equipment of some coal-fired power plants is fossilized, and thus the integration of coal-fired power plants and solar energy systems may require higher investment costs. The solar proportion in the hybrid power system is relatively small, and coal-fired still plays a more important role in hybrid systems.

Can a solar-biomass hybrid power system work without energy storage device?

A solar-biomass hybrid power system without energy storage device was proposed by Srinivase and Reddy . The behaviour of the hybrid system under different solar intensity conditions was analyzed. The results demonstrate that under the specified condition, the system cycle efficiency was 27 %.

Do grid-connected solar panels save energy?

Although grid-connected solar panels can reduce the fossil fuel consumption of thermal power plants, these savings are at least partly offset by the additional fossil fuels required to build and maintain what is essentially a dual energy infrastructure.

FuelsVirtual StorageA flywheel is a heavy  
wheel attached to a rotating shaft.  
Expending energy can make the wheel  
turn faster. This energy can be extracted  
by attaching the wheel to an electrical  
generator, which uses electromagnetism  
to slow the wheel down and produce  
electricity. Although flywheels can  
quickly provide power, they can't store a  
lot of energy. See more on
