## Overview

---

How a charging pile is developing in China?

Under the development of new energy vehicles, especially the tram policy of taxi and online car hailing, has promoted the industrial development of charging piles. China's public charging piles mainly rely on charging owners using charging services to make profits, and many charging pile manufacturers have successfully entered the market.

What is a charging pile?

Through the integration of wifi, Internet of Things, charging piles will have the functions of monitoring, alarm, information and data analysis, which can realize the interconnection, sharing and sharing of data, information and funds between different charging piles and between different operators.

What are the different types of charging piles?

Public charging piles and private charging piles are divided into two types of DC piles and AC piles. Various types of charging piles have different construction costs. Among them; the private charging pile is generally an AC charging pile, with an investment cost of less than 5,000 yuan.

How big is China's charging pile market?

At present, many research institutions have analyzed and estimated the development scale and space of China's charging pile market, but different opinions vary, some think that tens of billions, some think that more than 10 billion, 20 billion, or even more than one trillion yuan. Why are the predictions so different?
