# **Cheap solar on-site energy**

## Overview

---

Is solar energy the cheapest way to generate electricity?

Solar energy is growing faster than any other energy technology, and it is increasingly the cheapest way to generate electricity around the world. If countries take bolder action to lower their greenhouse gas emissions, solar output could grow sixfold by 2030 and sixteenfold by 2040. This is a problem for the United States.

Is solar energy the cheapest form of energy?

Professor Stephen Forrest of the University of Michigan states that "solar energy is about the cheapest form of energy that mankind has ever produced since the industrial revolution". With these devices used on windows, your building becomes a power plant.

Which solar technology is the cheapest?

Currently, silicon is the cheapest solar technology. However, Swift Solar expects its panels to produce more power per dollar than silicon once scaled up. According to Eperon, silicon panels are inexpensive and good for helping to de-carbonize the world, but they are not good enough.

Is rooftop solar a good option for a building?

Rooftop solar remains one of the most accessible and cost-effective ways to generate on-site power, particularly for facilities with high daytime energy usage. These systems can typically offset a large portion of energy consumption in a building and are relatively simple to install.
