# **Compact power station factory in Estonia**

**Low Voltage  
Lithium Battery**

**6000+ Cycle Life**

## Overview

---

How much will Estonia's nuclear power plant cost?

He said on no specific reactor has been chosen yet. The plant is expected to be built by private investors and company Fermi Energia has been at the forefront of Estonia's nuclear power plant discussions. The project is expected to cost €2 billion euros and small modular reactors with a capacity of 300 megawatts are being considered.

What is the largest power plant in Estonia?

The largest power complex in the country, Narva Power Plants, consists of the world's two largest oil shale -fired thermal power plants. The complex used to generate about 95% of total power production in Estonia in 2007. Falling to 86% in 2016 and 73% in 2018.

Is Fermi Energia planning a 600 MW nuclear power plant?

In January this year, Fermi Energia submitted an application to Estonia's Ministry of Economic Affairs and Communications to begin the state spatial planning process for a 600 MW nuclear power plant.

Are SMRs a viable option for Estonia's electricity supply and climate goals?

In July 2019, the company launched a feasibility study on the suitability of SMRs for Estonia's electricity supply and climate goals beyond 2030, following a financing round from investors and shareholders. In February 2023, the company selected GE Hitachi Nuclear Energy's BWRX-300 SMR for potential deployment by the early 2030s.
