## Overview

---

Can inverters be installed outside?

As a rule, inverters designed for outdoor use may be installed either outdoors or indoors, however indoor inverters can only be installed indoors. The great majority of grid-tied or string inverters available today are designed for outdoor installation.

Should solar inverters be indoor or outdoor?

Outdoor installation of solar inverters is more common than indoor installation primarily because it saves space, improves energy transfer efficiency, and lowers installation costs.

Why should you install an outdoor inverter?

**Agricultural and Rural Settings:** In agricultural or rural settings where outdoor space is abundant, outdoor installation offers a practical and cost-effective solution. Inverters can be mounted on poles, walls, or ground-mounted racks, optimizing space utilization and simplifying installation and maintenance.

Where should a solar inverter be installed?

The right locations for an outdoor solar inverter may include:

- North-Facing Walls:** In the Northern Hemisphere, north-facing walls receive less direct sunlight throughout the day, making them cooler and more suitable for inverter installation. This placement helps avoid the risk of overheating and extends the life of the equipment.
