Distributed Liquid Air Energy Storage

Overview

Is liquid air energy storage a viable solution for a decarbonised power network?

Researchers from MIT and Norwegian University of Science and Technology (NTNU) find that liquid air energy storage (LAES) represents a promising solution for long-duration storage in grid environments on a decarbonised power network.

What is liquid air energy storage (LAES)?

S-based power systems. Liquid Air Energy Storage (LAES) is a game changing technology which can unlock the full potential of renewable energy by making it as reliable and dispatchable as energy.

Are liquid air energy storage systems economically viable?

“Liquid air energy storage” (LAES) systems have been built, so the technology is technically feasible. Moreover, LAES systems are totally clean and can be sited nearly anywhere, storing vast amounts of electricity for days or longer and delivering it when it’s needed. But there haven’t been conclusive studies of its economic viability.

Could liquid air energy storage outperform batteries?

MIT and NTNU research shows liquid air energy storage (LAES) offers a cost-effective, efficient solution for long-duration grid storage. With competitive LCOS and reliable performance, LAES could outperform batteries and pumped hydro for a decarbonized power network.
