Estonia double glass components with aluminum frame

Overview

What types of glass products do Estonian companies offer?

For Estonian companies, we have mostly designed and constructed glass partitions and sliding door systems for offices. However, private persons mainly order shower enclosures, various railings, as well as doors and partitions. Even though these items are the most popular, they are far from constituting the whole range of options offered by glass.

Are aluminium glass doors a good choice?

Aluminium glass doors are the most trending contemporary door designs these days, and are preferred in most offices and commercial places. Glazed door designs with glass panels framed in aluminium profile stiles and rails is considered more sophisticated and sturdy than frameless glass or wooden doors.

What is aluminium door design?

This aluminium door design also allows glass panels to be changed without demounting the door from the door frame. These doors can be ordered in any colour of powder coating or anodizing to match the rest of interiors.

What is the difference between gd01 & gd02 aluminium glass doors?

GD01 aluminium glass door has been designed keeping in mind standard hardware available including concealed or open door closer, dead locks, mortise lock and optional handles (as GD01 comes with integrated handle in stile profile) GD02 is a very sleek single glass pane modular aluminum stile door, suitable for all interior applications.
