# **Estonia vigorously promotes energy storage on the power generation side**

## Overview

---

Where is Estonia's largest battery storage facility located?

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid. Estonian state-owned energy company Eesti Energia has inaugurated the nation's largest battery energy storage facility at the Auvere industrial complex in Ida-Viru County.

Why is electricity important in Estonia?

Electric power generation has great significance both for the economy of Estonia and for the surrounding region. Estonia supplies much of the power requirements of Latvia and parts of northwestern Russia. Most of the electricity produced in the country is generated by thermal power plants fired with oil shale.

What is the main source of energy in Estonia?

In 2014 Estonia's primary energy production exceeded 244 thousand TJ with over 77 percent produced from shale oil and 18 percent from wood. Estonia energy demand is satisfied through domestic production (70 percent) and imported supplies, mainly natural gas and both gasoline and diesel oil (30 percent).

What are the different types of energy transformation in Estonia?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Estonia for 2022. Another important form of transformation is the generation of electricity.
