

BLINK SOLAR

Full set of solar panels solar panels

Overview

Should you install a solar plus storage energy system?

The main advantage of installing a solar plus storage energy system is that it gives you the ability to use solar electricity even when the sun isn't shining. When you install a solar panel system without a battery, excess electricity that your system generates is sent back to the grid.

How many solar panels do I Need?

The average home needs between 20 and 25 solar panels to fully offset their utility bills with renewable energy. This number depends on a variety of factors including location, climate, panel efficiency, and individual panel specifications.

What are the different types of solar panels?

Solar panels are generally broken into two groups by cell type: monocrystalline and polycrystalline. While there are other types of solar technologies that exist (like thin-film cells), the majority of photovoltaic solar panels available for installation are either monocrystalline or polycrystalline, and are made out of silicon.

What are all-inclusive solar kits?

These all-inclusive solar kits are designed for simplicity, featuring everything you need for a seamless setup and installation. With high-performance lithium battery options and versatile connectivity options, our solar power systems can be connected to solar, wind, backup generator, or utility grid sources.
