Greek Solar Lighting Power System

Overview

Does Greece have a plan for rooftop solar PV?

November 2023, Greece submitted its NECP with more ambitious and updated targets for renewables and solar: 23.5 GW for all forms of renewables, from which 13.4 GW came from solar power capacity. However, there is no roadmap or strategy at this time in regards to rooftop solar PV in particular.

What impedes solar development in Greece?

Currently, probably the main reason that impedes solar development and that makes administrative procedures long and burdensome in Greece, including rooftop solar, is grid availability. In many areas, applications for solar rooftop PV are being rejected due to lack of electricity grid capacity.

Why does Greece have a high wind and solar potential?

Due to its geographical position and shape, Greece has a verified high wind and solar potential (especially at the eastern part of the country), and the western part has a significant hydro potential (mainly at the west) that is already being exploited.

Are PV systems a solution to voltage stability problems in Greece?

As shown in Fig. 3, PVs have considerably reduced the (transmission) system load; this fact contributed drastically to solve the severe voltage stability problems that the Greek system faced for almost two decades, especially during peak hours (noon) in summer.
