# Haiti solar Panels

## Overview

---

Can solar energy be used in Haiti?

Solar energy offers interesting prospects in Haiti, by offering energy self-sufficiency to the most isolated cities, in the absence of a power grid. The country's location in the tropics gives it very strong solar energy potential. It is believed solar energy will play a fundamental role in access to electricity over the next 10 to 15 years.

Why is distributed solar PV the only energy source in Haiti?

Since only about 13% of the people even have grid access, distributed solar pv is the only energy source that can supply all the people electricity for now. Haiti has limited energy resources: no petroleum or gas resources, small hydroelectricity potential and rapidly declining supplies of wood fuels.

Is Haiti a solar power market?

Recently, many solar companies have seen Haiti as a huge market potential for solar energy. The founder of 10Power estimates that the potential solar power market is worth over \$500 million. In 2013, the completion of Hôpital Universitaire de Mirebalais came to an end. This hospital is the largest solar-powered hospital in the world.

What is the solar power plant capacity in Haiti?

The solar generation capacity of the Solar Power Plant will be 1.2 MWp with a storage capacity of 800 kW / 330 kWh. in the Commune of Jacmel, in the South-East Department and will be connected to the regional electricity network of Jacmel. Haiti's 2020 total GHG Emissions (mtCO2e) per the World Bank is 10,267.
