High frequency industrial inverter

Overview

What is a high frequency inverter?

A high frequency inverter is a type of UPS (Uninterruptible Power Supply) that uses a microprocessor as its process control center. It employs software programming to control its operation, unlike traditional analog circuits.

What is a high efficiency inverter?

High Efficiency The high efficiency and automatic economy mode are designed to allow digital clocks to work properly and ensure you many more hours of operation from your batteries. IPower-Plus is a high - frequency pure sine wave inverter that can convert 12/24/48VDC to 220/230V AC and power the AC loads.

What is a high frequency inverter block?

The high frequency inverter block alone consists of a high frequency oscillator, a MOSFET driving stage to provide necessary current to drive the ferrite core transformer. The transformer outputs 220VAC at several KHz which is not suitable for home appliances, so the high frequency must be converted to 50 Hz before feeding to a load.

What is a rugged DC/AC inverter?

. rugged DC/AC inverter uses field proven, microprocessor controlled high frequency PWM technology to generate 50VA low voltage pure sine wave output. The design is based on mature technology . enhanced and the converters achieve higher output power.
