# **High-power AP outdoor base station installation**

## Overview

---

How do you install an outdoor access point?

**The Process of Outdoor Access Point Installation** Use a marker pen to mark the location of the installation holes on the wall. Use an impact drill to drill holes in the wall according to the marked positions. Use a hammer to tap the expansion bolts vertically into the hole. Fix the bracket on the wall with four M6 screws.

How difficult is outdoor access point installation?

While outdoor access point installation is generally manageable, it does come with its set of challenges. Here is a summary of the most common issues encountered during installation: **Lack of Power Supply:** One of the main difficulties in outdoor deployments is ensuring a reliable power source.

Should APS be mounted on a pole?

Pole mounting is a good option when installing the APs away from the buildings, which is more common in a wireless mesh system where no cables need to be pulled to each location. It's ideal for providing a 360° overall coverage for your premises, but if the access point is mounted too close to the pole, the RF will be severely attenuated.

How do I install an access point?

The access point will fully cover the hole of the installation box. If you don't have used the installation box, then you can just mount the mounting plate on the ceiling. Just make sure that the cable is short enough to fit behind the access point. We will also need to connect the access point to your network.
