## Overview

---

What is an emergency lighting inverter?

An emergency lighting inverter is referred to as a 'UPS (Uninterruptible Power System)' for emergency lighting.

What is a lighting inverter?

A lighting inverter provides the backup power for a lighting system by converting DC battery power into the standard AC voltages that lights need to operate during an emergency. Inverters are made up of several components: Emergency lighting inverters are often distinguished by the battery capacity they offer.

What is an emergency inverter system?

Inverter systems are made up of a set of DC batteries and electronics that can convert the DC power from the batteries into an AC power source needed for the emergency lighting loads. Emergency inverter systems will provide enough emergency AC power for the required time to exit the building if necessary.

What is an emergency lighting backup inverter?

An emergency lighting backup inverter is a device that converts DC battery power to standard AC voltages to provide backup for various lighting systems, including fluorescent and LED lights, in an emergency.
