## Overview

---

How many solar panels are there in Cuba?

This greatly underdeveloped energy source is slowly making its way across the island: there are currently more than 6,000 photovoltaic panels and 1,500 solar heaters in use. The installed solar energy generating capacity in Cuba is around 3 megawatts, or 0.07 % of the total installed capacity.

Can Cubans buy solar panels?

The passage of Decree-Law 345 in 2019 permits Cubans to purchase photovoltaic solar panels for private use and to sell surplus energy to state company Unión Eléctrica. <sup>:159</sup> In 2022, about 1.5% of electricity came from solar power.

Is there a problem with solar power in Cuba?

Another hurdle for the expansion of solar power in the residential sector lies in the electricity tariff subsidy, which is charged in a devalued currency. According to official figures, around six percent of the more than four million households in Cuba consume more than 500 kilowatt hours (kWh) per month.

How does Cuba generate electricity?

About 95 percent of Cuba's electricity generation relies on fossil fuels, which include the natural gas produced with domestic oil, offshore oil rigs leased from Turkey, as well as diesel and fuel oil based generators and engines.
