Household solar panels

Overview

How many homes have solar panels?

More than five million homes have solar panels, and 13% of homes could have solar panels by 2030. But if you're considering home solar panels for the first time, you might still have some questions. Here's what you need to know about solar panels at home, how they can save you money, and what you need to know about the different ways to go solar.

Can solar panels power a home?

Solar panels are used to power everything from calculators to sports stadiums to satellites — and they can just as easily be used to power a home. You don't need to be a rocket scientist – or anything close to it – to get solar panels for your home.

Why should you choose solar panels for your home?

Solar panels for home use increase energy independence and lower long-term electricity costs with the help of sunlight, additional hardware, and certified professionals. When considering solar panels for your home, finding the right system design and installer is essential to maximize your savings and investment in renewable power.

What are the different types of home solar power systems?

There are three types of home solar power systems: grid-tied, hybrid, and off-grid. Grid-tied: Your solar panels are always connected to the grid. You get power when your panels aren't producing, but they'll shut down with a power outage.
