# How big is a storage power station

## Overview

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What is the largest pumped storage power station in eastern China?

Changlongshan hydropower station, the largest pumped storage power station in eastern China, has been put into full operation on June 30. It has six 350,000 kW pumped-storage units with a total capacity of 2.1 million kW. It will add an average of 2.435 billion kilowatt-hours of electricity to the grid each year during peak hours.

What is Ningxia power's energy storage station?

On March 31, the second phase of the 100 MW/200 MWh energy storage station, a supporting project of the Ningxia Power's East Ningxia Composite Photovoltaic Base Project under CHN Energy, was successfully connected to the grid. This marks the completion and operation of the largest grid-forming energy storage station in China.

What are the core functions of energy storage power stations?

In addition to these core functions, functions such as anti-backflow protection, support for parallel/off-grid operation, and islanding protection further enhance the reliability and versatility of energy storage power stations.
