# **How long can a home UPS uninterruptible power supply last**

## Overview

---

How long does an uninterruptible power supply last?

Like all other IT equipment, an uninterruptible power supply (UPS) has a finite lifespan. The average expected lifecycle of a UPS is eight-to-ten years. The batteries typically need to be replaced at least three times during that lifespan. Of course, once a UPS reaches the end of its lifespan, it should be replaced to mitigate downtime.

How long do UPS batteries last?

In this way, the UPS batteries prevent dirty power from reaching sensitive electronic equipment — which is especially important in rural areas and other environments where the power supply is often unstable. Most UPS batteries have a life expectancy of three to five years when operating under ambient conditions — 68 to 77 degrees Fahrenheit.

How long can a ups last without power?

Discover how long a UPS can last without power—from 1 to 8 hours! Learn about UPS battery life, runtime, and factors affecting performance.

How long does an UPS backup last?

For example, if you've got a 1,000-watt UPS with 125-minutes of standby time, your backup should last for 8-hours with no power outage. However, if you do go through an extended power outage that ends up lasting longer than 8-hours, your UPS would then need to be replaced.

## How long can a home UPS uninterruptible power supply last

---

### How Long Will a UPS Last?
