## Overview

---

Are lithium ion batteries good for solar storage?

Lithium-ion batteries are popular for solar storage due to their high energy density, long lifespan, and decreasing cost. There are several types of lithium-ion batteries, but two types are the most commonly used for solar storage: lithium iron phosphate (LFP) and nickel manganese cobalt (NMC).

Do I need a special solar panel to charge lithium-ion batteries?

No, you do not need a special solar panel to charge lithium-ion solar batteries. Charging a lithium-ion battery is possible with any solar panel. However, there are essential considerations to ensure safe and efficient charging of your lithium-ion batteries with your solar panels.

What is a lithium-ion solar battery?

A lithium-ion solar battery is a type of rechargeable battery used in solar power systems to store the electrical energy generated by photovoltaic (PV) panels. Lithium-ion is the most popular rechargeable battery chemistry used today.

How do lithium ion batteries work with solar panels?

Lithium-ion batteries work with solar panels by storing the excess energy generated by the solar panel in the form of direct current (DC) electricity. The DC electricity from the solar panels flows through an inverter, which converts it into alternating current (AC) electricity. The AC electricity is used to power your home appliances.

"Storage" refers to technologies that can capture electricity, store it as another form of energy (chemical, thermal, mechanical), and then release it for use when it is needed. Lithium-ion batteries are one such technology. Although using energy storage is never 100% efficient--some energy is always lost in converting energy and retrieving it--storage See more on [energy.gov/cool/lithium](http://energy.gov/cool/lithium)
