What is a lipo 6S battery?

Client Usage Report: Leveraging cutting-edge lithium polymer technology. A Lipo 6s battery is a lithium polymer battery with six cells connected in series (hence “6s”). Each cell provides 3.7 volts nominally, resulting in a total voltage of 22.2V when fully charged (4.2V per cell).

How many volts can a lipo 6S battery deliver?

Did you know that a single Lipo 6s battery can deliver up to 22.2 volts, making it a powerhouse for high-performance RC cars, drones, and other electronics?

Unlike traditional batteries, these lithium polymer packs pack incredible energy density and discharge rates—but they also require careful handling to avoid risks like swelling or fire.

What cell types are used in a 6S battery?

Cell types used in 6S batteries (LiPo pouch, 18650, 21700) A 6S battery can be built using different cell formats: Nominal 3.6V, capacity 2600–3600mAh. Higher capacity 4000–5000mAh. Different applications require different chemistries and formats. Part 5. LiPo vs Li-ion vs LiFePO4 (Chemistry comparison) When to Choose Which?
