How to connect solar glass to the grid

Overview

How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

Should you connect solar panels to the electrical grid?

Connecting solar panels to the electrical grid is one of the most effective ways to maximize your solar investment while maintaining reliable power. Grid-tied solar systems allow you to use solar energy during the day, sell excess power back to the utility through net metering, and draw from the grid when needed.

What does 'connecting solar to the grid' mean?

When we talk about "connecting solar to the grid," we're referring to the process of linking your solar energy system to the electrical grid, which is the network that delivers electricity to homes, businesses, and industries.

How does a grid tied solar system work?

This connection allows your solar system to share excess energy with the grid when your system produces more electricity than you need. It also enables you to draw power from the grid when your solar panels aren't producing enough energy—such as at night or on cloudy days. The Basic Components of a Grid-Tied Solar System
