Industrial portable 28v power supply

Overview

What is a 28V power supply?

These 28V power supplies (IP65/IP68) are sufficient for controlling valves, relays, contactors and magnetic switches and for most PLC controls. The 28V switching power supply (IP65/IP68) converts the mains voltage into a regulated 28VDC output voltage, but has a higher efficiency and a smaller size.

Are 28V power supplies better than linear power supplies?

Though our 28V power supplies are more complex than linear benchtop power supplies, our high-performance switched-mode power supplies are quiet and well-regulated. In addition, they feature input power factor correction and generally cost less than an equivalent linear power supply.

Are all 28V DC power supplies mains powered?

Almost all 28V DC power supplies in this range of ground power units are mains powered units, with the exception of the TC400/28 units which is a battery unit. The RBSC and RBPS range of 28V DC power supplies are specifically designed and built by Red Box to provide the cleanest possible DC power unit.

What is a 28 volt DC supply?

It covers both AC and DC supplies; DC systems can be either 28 V or 270 V. In my experience the 28 V DC specs are the most widely used, so we'll focus on those for the rest of the article. The 28 V aircraft supply can deviate significantly from the nominal voltage, and the system's power-supply circuitry must be able to cope with this.
