Irish Super Farad Capacitor

Overview

What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

Where can I buy a capacitor?

At Farnell, we provide an extensive selection of capacitors that cater to both basic and complex electronic applications. AEC-Q200 Wide frequency band, high inductance, for power line. Buy Capacitors. Farnell® Ireland offers fast quotes, same day dispatch, fast delivery, wide inventory, datasheets & technical support.

How do you measure the capacitance of a supercapacitor?

Supercapacitors have such large capacitance values that standard measuring equipment cannot be used to measure the capacity of these capacitors. Capacitance is measured per the following method: Charge capacitor for 30 minutes at rated voltage. Discharge capacitor through a constant current load. Measure voltage drop between V1 to V2.

What does L1 & L2 mean in a supercapacitor?

L1= Load life rating of the super capacitor (typically 1000 hours at rated temperature). L2= expected life at operating condition. Tm= Maximum temperature rating of the supercapacitor. Ta= Ambient temperature the supercapacitor is going to be exposed to in the application. Vr = rated voltage of capacitor. Warning.
