# Is the lithium iron phosphate battery pack connected in parallel or in series

## Overview

Can You charge lithium iron phosphate batteries in parallel?

Combining series and parallel connections allows for customization of the battery pack’s energy (Wh) and power (W) density to suit specific needs, such as in electric vehicles or stationary energy storage systems. By following these guidelines, you can effectively charge lithium iron phosphate batteries in parallel.

Can LiFePO4 batteries be connected in parallel?

Yes, LiFePO4 (Lithium Iron Phosphate) batteries can be connected both in series and parallel configurations. Connecting in series increases the overall voltage while maintaining the same capacity, whereas connecting in parallel increases the capacity while keeping the voltage constant.

Can lithium-ion batteries be connected in parallel or in series?

Connecting lithium-ion batteries in parallel or in series is not as straightforward as a simple series-parallel connection of circuits. To ensure the safety of both the batteries and the individual handling them, several important factors should be taken into consideration.

Why are lithium batteries connected in series?

Lithium batteries are connected in series when the goal is to increase the nominal voltage rating of one individual lithium battery - by connecting it in series strings with at least one more of the same type and specification - to meet the nominal operating voltage of the system the batteries are being installed to support.
