Japan's new energy storage ratio

Overview

Will renewables be the dominant energy source in Japan by 2040?

While solar power continues to show significant progress, becoming a dominant renewable energy source in Japan, other renewable sources including wind and geothermal are lagging. This slower pace in diversifying the renewable portfolio will make it more difficult for renewables to be the projected dominant component of Japan's energy mix by 2040.

What is Japan's energy storage policy?

As policy, technology, and decarbonization goals converge, Japan is positioning energy storage as a critical link between its climate targets and energy reliability. Japan's energy storage policy is anchored by the Ministry of Economy, Trade and Industry (METI), which outlined its ambitions in the 6th Strategic Energy Plan, adopted in 2021.

What will Japan's Energy Policy look like in 2025?

2025 is a critical year for energy policy, with the release of new plans to achieve the twin goals of securing stable energy supplies and accelerating the energy transition. Japan's Seventh Strategic Energy Plan emphasised the expectation of increased electricity demand and the importance of maintaining energy security.

Is Japan's 7th strategic energy plan a competitive site for business?

Renewable Energy Institute's comments following the cabinet's decision on Japan's 7th Strategic Energy Plan on 18 January 2025. We believe that the 40-50% share of renewables in the 7th Strategic Energy Plan is not sufficient for Japan to be a competitive site for business operation.
