Large-scale energy storage projects in Europe

Overview

How many energy storage projects are there in Europe?

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy Storage Inventory, launched by the European Commission. The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe.

Why is energy storage growing so fast in Europe?

The fleet of energy storage projects in Europe, including both pumped hydro and battery energy storage systems of all sizes, is expanding rapidly. This growth is set to continue at a strong pace through 2030, fueled by technological advancements, supportive policies, and other key factors.

How big is Europe's battery energy storage system?

Europe is racing to add very large grid batteries to balance rising wind and solar output. As of mid-late 2025, four utility-scale Battery Energy Storage System (BESS) projects stand out by size — each designed in the 0.5–2.8 GWh class and backed by reputable developers and public filings.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

Large-scale energy storage projects in Europe

Europe's energy storage fleet reaches 89 GW

The fleet of energy storage projects in Europe, including both pumped hydro and battery energy storage systems of all sizes, is expanding rapidly. This growth is set to continue ...

New report: European battery storage grows 15% in 2024, EU energy

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing ...

Product Details

Europe's battery energy storage boom: Record growth and ...

Revenue stacking models - where batteries participate in energy arbitrage, grid balancing, and capacity mechanisms - are already demonstrating viable business models in ...

14 GW of energy storage capacity under construction in Europe

The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe. A real-time ...

Energy storage

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

Europe installed 12GW of energy storage in 2024

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, bringing cumulative installations to 89GW. According to the ninth annual ...

Europe's giant batteries: the four biggest ...

Europe is racing to add very large grid batteries to balance rising wind and solar output. As of mid-late 2025, four utility-scale Battery ...

Europe's Battery Storage Additions Set for 45% Jump in 2025

15 hours ago Europe's battery storage sector is entering a period of rapid scale-up, with annual deployments set to climb from 11 GW in 2024 to 16 GW in 2025, a 45% year-over-year ...

 **LFP 12V 100Ah**

Europe's giant batteries: the four biggest planned/under ...

Europe is racing to add very large grid batteries to balance rising wind and solar output. As of mid-late 2025, four utility-scale Battery Energy Storage System (BESS) projects ...

Europe's Utility-Scale Energy Storage Market Set to Nearly ...

...

In 2025, Europe's utility-scale energy storage sector continues to lead growth and is projected to achieve a near twofold expansion. Large-scale energy storage markets have particularly stood ...
