## Overview

---

Globally, solar projects are being rapidly built or planned, particularly in high solar potential regions with high energy demand. However, their energy generation potential is highly related to the weather conditio.

Do large-scale solar power plants have environmental issues?

Large-scale solar power plants are being developed at a rapid rate, and are setting up to use thousands or millions of acres of land globally. The environmental issues related to the installation and operation phases of such facilities have not, so far, been addressed comprehensively in the literature.

Does large-scale solar power displacing grid electricity?

We aggregated the information in Section 4 to produce the net environmental impacts of large-scale solar power displacing grid electricity. Considering Tables 1–5, the following observations are made: (i) twenty two of the thirty two net impacts are beneficial, Emissions of CO<sub>2</sub> from the life cycle of large-scale solar power.

Why are solar panels causing fires?

Faulty wiring, inverter failures, and battery malfunctions are the main culprits. In some high-profile cases, such as in Germany in 2023, large rooftop solar systems caused fires that destroyed homes and businesses.

Do solar power plants have a negative impact?

None of the impacts are negative relative to traditional power generation. We rank the impacts in terms of priority, and find all the high-priority impacts to be beneficial. In quantitative terms, large-scale solar power plants occupy the same or less land per kW h than coal power plant life cycles.
