## Overview

---

Does Bess require uninterrupted power?

Some BESS suppliers mandate uninterrupted power to maintain the operation of thermal management systems, ensuring battery temperatures remain within desired limits to minimize degradation. BESS fire safety standards, such as NFPA 855, outline minimum requirements for backup power for fire safety systems.

What are Bess auxiliary loads?

BESS auxiliary loads typically fall into the following three categories:

- Control and communication equipment, such as the battery management system and network switches;
- Thermal management systems, such as HVAC or chillers;
- Fire safety systems, such as fire alarms, control panels and gas ventilation systems (if present).

Do I need backup power for a Bess auxiliary load?

For certain projects, backup power must be provided for the BESS auxiliary load as required by the BESS supplier or fire codes. Some BESS suppliers mandate uninterrupted power to maintain the operation of thermal management systems, ensuring battery temperatures remain within desired limits to minimize degradation.
