## Overview

---

What is a floating recovered oil storage tank?

The floating recovered oil storage tank is a towable floating oil/water storage tank with a hull shaped storage pocket. The tank/ barge is manufactured from neoprene coated fabric, which is strong, durable and lightweight. The superstructure is composed of compartments with internal airtight conical bulkheads for increased integrity.

What is a low pressure storage tank?

For the purpose of this page, we focus on the atmospheric or low-pressure storage tank widely used from the production fields to the refinery. The most common shape used is the vertical, cylindrical storage tank. Gross capacities can range from 100 bbl to over 1.5 MMbbl in a single storage tank.

What are oil storage tanks?

Hydrocarbon storage tanks are industrial containers designed to safely store products such as crude oil, gasoline, or diesel fuel. They are cylindrical and vertical, with fixed or floating roofs, and operate at atmospheric pressure.

What are the different types of oil storage tanks?

Oil storage tanks come in a myriad of shapes, sizes, styles and materials. Below, we take a closer look at the different types of oil storage tanks. Floating roof tanks feature a dynamic roof that rises and falls depending on the level of oil being stored. This helps minimise the accumulation of vapour inside the tanks.
