Make a new solar panel profit

Overview

While earnings can fluctuate significantly based on project volume and operational efficiency, many owners see substantial returns, often in the range of 15-25% net profit margin per installation. How does a solar installation business make money?

Whether you work with a franchise or wholesaler, your installation business makes money through the successful installation of solar units. Some leasing programs generate regular income by charging their customers a monthly bill, which includes the cost of the panel installation and any extra power the customers are using from the grid.

How do you make money with solar panels?

Your largest costs will be purchasing the panels from the distributor and your payroll. You can control supply costs by purchasing large lots of panels and using them for multiple jobs, lowering your per unit cost. Another way to increase profits is to reach out to other solar panel contractors to offer assistance as a sub-contractor.

How can I profit from solar energy?

You can profit from solar energy by taking advantage of Renewable Energy Certificates (RECs). RECs are tradable commodities that represent 1 megawatt-hour of green energy. If you own a solar system, certain states require a portion of their electricity to come from renewable “green” energy sources, and selling these certificates can provide a revenue stream.

How much money can you make installing solar panels?

For companies that only install panels for customers who pay all at once, you can see profits of \$5,000 to \$10,000 per job. However, this requires a steady stream of new contracts. If you’re working with a large industrial contract, you can see a profit in the hundreds of thousands for a year-long job.
