Monitoring UPS uninterruptible power supply is easy to use

Overview

What is UPS / uninterruptible power supply?

UPS or Uninterruptible Power Supply is vital protection against loss of data and costly hardware damage. It ensures that the network systems are operational when the main source of power fails. Therefore, if not monitored properly the company may put risks of downtime to their data center, server room, and other crucial equipment.

How do I monitor APC uninterruptible power supply (UPS) devices?

Domotz network monitoring software allows you to monitor APC Uninterruptible Power Supply (UPS) devices. We provide pre-configured SNMP template and a custom script for APC UPS devices. Use them to monitor metrics such as battery status, voltage, current, temperature, estimated remaining minutes, and charge level.

Why is ups monitoring important?

The obtained information can be critical in the event of a power outage, as it can help to determine how long the system will be able to run on battery power. Additionally, a UPS monitor helps troubleshoot any UPS battery issues, such as if it is not charging properly. Apart from that, there are more such benefits of incorporating UPS Monitoring.

Should you use ups power management software?

Well, so too will the monitoring interface that you have relied on. Instead, the industry's best practice is to deploy UPS power management software. These can come in small monitoring devices (1 RU or less) that are available to collect important status information from virtually any UPS backup system.
