Outdoor Power BESS Make Money

Overview

Energy Arbitrage – Great way to create revenue for BESS is charging the batteries for BESS when there are low electricity prices (pulling energy from the grid in typically off-peak hours) and then discharging the batteries (selling the stored energy to the grid) when prices are high (when energy demand is high typically on peak hours or when the sun goes down). How does Bess generate revenue?

Each of the three main ways that BESS generates revenue offers distinct opportunities to monetize investments. The primary revenue stream for BESS projects comes from price arbitrage – buying electricity when prices are low and selling it when prices are high.

How do Bess projects make money?

The primary revenue stream for BESS projects comes from price arbitrage – buying electricity when prices are low and selling it when prices are high. The strategy is straightforward: charge when prices are low and discharge when prices are high.

What drives Bess revenue stack performance in 2021-22?

There are some important common drivers across all European power markets that have shaped BESS revenue stack performance across the last 3 years. All markets generated exceptional BESS returns in 2021-22 driven by a parallel: Power crisis – power market tightness given e.g. major French nuclear outages.

How does Bess work?

From energy arbitrage – where batteries buy electricity at low prices and sell it during peak demand – to ancillary services that stabilise the grid, and capacity payments for ensuring power availability, BESS projects offer diverse revenue streams.
