Outdoor small energy storage background

Overview

What are outdoor small cells used for?

Outdoor small cells are used to provide network densification, which means adding more cell sites to increase network capacity, as well as coverage in areas not reached effectively by macro cells. EnerSys® is powering 5G networks.

How can EnerSys help accelerating small cell and 5G deployment?

From a single access point to the grid, you can power dozens of devices. This approach is accelerating small cell and 5G deployment. EnerSys® is a leading supplier of DC and AC power systems, remote power systems, distribution equipment and intelligent network controls for communications networks.

Are outdoor small cells necessary for 4G/LTE?

While valuable for 4G/LTE, they are absolutely essential for the ultra-low latency requirements of 5G. Powering outdoor small cells can be a daunting task. Regulatory and aesthetics considerations can change by locale and the sheer number of sites presents a logistical challenge in coordinating with the electrical utility.

How do outdoor small cells complement the macro cell network?

Outdoor small cells complement the macro cell network by providing pinpoint coverage in urban locales, additional capacity to offload the macro (densification), and economical solutions for rural areas. They are becoming a vital part of the wireless network and an essential component to successful deployment of 5G.
