Poland Krakow outdoor power production company

Overview

Are power plants in Poland still a big part of the energy sector?

Power plants in Poland are still a big part of the Polish energy sector. Energy.instrat.pl team prepared open database on power plants and CHP's, which is a great starting point of all energy transition analyses. In addition to updating the data for 2020-2023, the database has gained new columns with more information and new functions.

How does a power plant work in Poland?

These thermal units produce electricity (and usually heat) by burning fuels. Approximately 90% of the power units are suitable for cogeneration, i.e., they can generate electricity and heat. The average age of active power plant units in Poland is 35 years, with hard coal units being the oldest, averaging 42 years.

How is Poland transforming its energy sector?

Poland is currently in the process of a substantial energy sector transformation, with the objective of reducing its dependence on coal and increasing the proportion of renewable energy sources in electricity generation to 32% by 2030. The government is enacting policies to encourage the development of biomass, solar, and wind energy initiatives.

Is there a coal power plant in Poland?

Plenty of aged coal capacity in the south, increasingly many gas CHPs in the rest of the country. Map of thermal power in Poland Map of power plants and combined-heat-and-power plants containing generation units of at least 20 MW in Poland.
