Portable power supply field

Overview

What is a sealed 24 volt DC field power supply?

A sealed 24 Volts DC (Vdc) field power supply from SolaHD promises to lower the cost of delivering field power to machines by eliminating separate power supply enclosures and simplifying power supply wiring. Typical 24 Vdc supplies used for field power are designed to be used in a protective enclosure.

Who makes portable power units?

Japanese and Korean companies are the most involved in portable power units for electronic devices, and have recently launched a series of products that are mainly based on direct methanol-fuelled PEFC; large-scale commercialization of these devices is planned in the coming years.

Can a 24 volt power supply be used in a protective enclosure?

Typical 24 Vdc supplies used for field power are designed to be used in a protective enclosure. SolaHD's IP67 SCP-X power supplies come in an environmentally-sealed, machine-mountable and compact package compliant with IP66 and IP67 ratings. The corrosion-resistant housing withstands dust and water while efficiently dissipating heat.

What is a 24 volt power supply?

A 24 Vdc power supply is typically DIN rail mounted inside an enclosure that has a special environmental rating such as IP67. Therefore, a traditional power supply is not designed with any special resistance to water or other contaminants.
